Dear Parents and Guardians,

It has been reported to me, that a case of headlice has been detected in Year 4 and 5 class. I would ask that all families check their child/ren’s hair and treat with the appropriate medication if necessary. An infected child should remain at home until the treatment has been completed and all signs of headlice have been eliminated.

When headlice is found it is essential that all clothing, particularly hats, all bed clothes, towels etc are washed for all family members. This will assist greatly in reducing the spread of headlice or of it recurring.

Please refer queries to your local chemist/pharmacy if you are unsure of an effective shampoo for the treatment and prevention of headlice.

Thank you for your cooperation in this matter.

Yours Sincerely

Marylou Gorham
Principal
